

EMPIRE BUILD
CONTRACTING COMPANY

RENEWABLE ENERGY PROFILE

Solar-powered lighting for infrastructure applications

SAUDI ARABIA | EST. 2020 | CR 7055381839

Civil. Mechanical. Electrical. Renewable energy. People. Logistics.

COMPANY INTRODUCTION

A clear scope. A practical approach.

Empire Build Contracting Company supports sustainable infrastructure through installation of solar-powered streetlighting systems and associated infrastructure components. Supplied references identify highway solar-lighting work in Saudi Arabia.

Existing supplied or website photograph; not assigned to a named contract.

Company at a glance

Established 2020 | Commercial Registration 7055381839 | Kingdom of Saudi Arabia. Chief Executive Officer: Shahzeb Khan.

Scope basis

Supplied experience supports solar-lighting infrastructure. Utility-scale PV, battery storage, energy yields and performance guarantees are not claimed here.

SERVICE CAPABILITIES

Support tailored to the requirement.

Solar-powered streetlighting

Support pole installation, associated infrastructure and coordination of installation interfaces for highway lighting applications.

Civil and site coordination

Review foundation readiness, pole positions, delivery routes and installation sequence with the responsible project team.

Technical scope review

Confirm equipment requirements, specialist responsibilities, inspection arrangements and handover requirements. Wider PV or battery-storage packages require a separate technical assessment.

Work-package boundaries

The agreed scope defines technical responsibility, personnel, equipment, inspection and acceptance requirements. Availability and commercial terms are confirmed for each enquiry.

EXECUTION AND SITE RESPONSIBILITY

Plan, coordinate and verify.

Understand the requirement

Review the scope, issued drawings, programme, location and site constraints. Clarify interfaces and responsibilities before committing resources.

Prepare and mobilise

Agree the method, resource plan, access arrangements and reporting contacts. Coordinate permits, induction and required inspection points.

Quality assurance and quality control

Use applicable drawings and approved requirements. Record agreed checks, report discrepancies and close outstanding items before handover.

Health, Safety and Environment

Review task hazards, communicate controls and coordinate PPE, permits, plant movement and work-area arrangements with the site team. Follow project emergency and environmental requirements.

Communication and completion

Track progress, raise constraints early and confirm changes through the responsible project team. Submit the agreed completion information.

Project-specific controls

This overview describes intended working practices. It is not a signed HSE policy or a claim of external certification. The applicable project requirements govern execution.

EXPERIENCE AND SCOPE BASIS

Relevant experience and interfaces

REFERENCE 01

WO-26 - Temporary Signalized U-Turn on Highway 55

Project No. 1100001343

NEOM, Highway 55, Saudi Arabia

Installation of solar streetlight poles.

Electrical / Solar lighting infrastructure

REFERENCE 02

Construction of HW-392 Trumpet IC-1, HW-55, and Camp City Diamond Interchanges 2 & 3

Project No. 4800001197

NEOM, Highway 55, Saudi Arabia

Installation of solar lighting systems and associated duct infrastructure.

Electrical / Solar lighting infrastructure

Reference and scope note

Supplied experience supports solar-lighting infrastructure. Utility-scale PV, battery storage, energy yields and performance guarantees are not claimed here.
